

Schedule Document

Critical path: T1→T6→T7→T2→T4→T5

Actions taken to keep the sprint on schedule:

- Regularly scheduled standups to ensure group members are aware of tasks and stay productive
- Broke stories down into smaller subtasks to ensure manageable and realistic workloads
- Completed parallel tasks that do not require dependencies

Despite good progress, we were not able to complete every task fully due to some unexpected pushbacks and the dependencies from the conversion of design to frontend leading to delays in some backend implementations, which can be seen in our Network Diagram (below).

Network Diagram for Sprint 2
