

Our Burndown Chart for **Sprint 3**:

Our burndown chart for Sprint 3 demonstrates more consistent tracking, aligning well with the ideal burn rate. The chart shows a steady decline over the entire timeline of the sprint, showing consistent task completion. Small upwards ticks show point re-estimation for better accuracy in story difficulty.

We updated our completed tasks in Jira throughout the sprint period (March 8th, 2025 - March 22nd, 2025).

Sprint 1 Velocity: 23

Sprint 2 Velocity: 31

Sprint 3 Planned Velocity: 34

The change in velocity between sprints can be attributed to improved team coordination and better story point estimation during sprint planning. By Sprint 3, our team has established stronger communication, reducing delays caused by misunderstandings. We dedicated more time to refining the backlog to work on clearer and more achievable goals.

Moving Forward

Our commitment to improving sprint tracking shows progress. Comparing this sprint to Sprint 2, we observe more realistic tracking and fewer last-minute updates.

For sprint 4, we will continue this progress.

- Minimize re-estimations by prioritizing backlog refinement during sprint planning
- Continue high velocity by delegating balanced workloads
